

**Exam Name** : APGCL\_Junior Manager\_Electrical

**Total Questions** : 100

**Description** : **Important Examination Instructions**

1. Each question will carry 1 (One) Mark for correct answer.
2. There will be a negative marking of 0.25 (one-fourth) marks for wrong answer
3. Do not use the alt-tab, mouse or any other device to shift from examination screen to any other screen or do not try to open any other application while attempting the examination. Doing so may result in discontinuation of examination and your examination will be considered as null and void. **Attempting to close the browser repeatedly will lock the exam.**

**How to use the system:**

1. **How to start the test:** You can start the test by clicking the Declaration Check box and then 'I am ready to begin button ' .
  2. **How to change the question:** For the move to the next question you have to click on the 'Save And Next' button the same as for move to the back, click on the 'Previous' button.
  3. **How to answer a question:** You can select any answer by clicking on the button displayed just before the answers. You have to finally click the button - Save and Next - to save your answer and move to the next question. In Exam Sections, the Red Circle corresponding to this question turns Green. You can go to any section / any question number by clicking the relevant control.
  4. **How to skip the question:** You can click the " Next Question" control to move on the next question
  5. **How to mark a question for review:** If you want to review any question later, you have to click the "Review" checkbox. This answer will be marked for review.
  6. **How to Submit your test:** By clicking On last question and Submit Test button one popup window display asking for "Are you sure, you want to Submit your test ?" You have to click on "YES" to submit your test.
- Circle symbols displayed at the bottom of the screen:
    - Red Color: Current Question.
    - Green Color: Attempted Question.
    - White Color: Unattempted Question.
    - Blue Color: Attempted and Reviewed Question.
    - Violet Color: Unattempted and Reviewed Question

**Q.1** Two bulbs marked 200 watt-250 volts and 100 watt-250 volts are joined in series and the combination is connected to 250 volts mains supply. The power consumed in the circuit would be

Q.6 Four heating coils are available for use in a heater. For a given line voltage, which of the following connection will produce maximum heat?

Marks 1

Question ID:  
1911

No	Options Details	Correct Option
1	all the four coils in parallel	✓
2	all four coils are connected in series	
3	two parallel pairs in series	
4	one pair in parallel with the other two in series	

Q.7

Three currents  $i_1$ ,  $i_2$  and  $i_3$  meet at a Junction in an AC circuit. All currents are marked as entering the junction. If  $i_1 = -3 \sin(\omega t)$  mA and  $i_2 = 4 \cos(\omega t)$  mA, then  $i_3$  will be

- (A)  $5 \sin(\omega t + 36.87^\circ)$  mA                      (B)  $4 \cos(\omega t + 36.87^\circ)$  mA  
(C)  $-5 \sin(\omega t + 36.87^\circ)$  mA                      (D)  $-3 \sin(\omega t + 36.87^\circ)$  mA

Q.12 Which statement about the inductance is incorrect?

Marks 1

Question ID:  
1917

No	Options Details	Correct Option
1	The inductance of a coil can be increased by adding few more turns to the coil	
2	The inductive reactance varies directly as the frequency of the applied voltage	
3	Inductive reactance can be measured by an ohmmeter	✓
4	An inductance does not oppose direct currents	

Q.13

For the wave shown in figure, average value of current is

(A) 1A

(B) 1.1 A

(C) 0.5A

(D) 1.5A
